RISK ALERTS

ADBE earnings after close = vol spike risk; tech growth fade ongoing; position size caution

VIX data unavailable; assume 16–18 regime but VERIFY premarket; sudden regime shift possible if inflation prints worse

Oil volatility elevated (WTI +0.88%, Brent -1.40% divergence) = supply/geopolitical risk; Mideast tension real

Sector rotation favor real assets; growth underweight bias = tech/QQQ fade risk; trim QQQ strength into earnings

Small-cap vol high (IWM +1.5%); earnings slate heavy (ADBE, CHWY, ORCL, GLBS, ACB, NNOX); expect post-close vol spike

Portfolio risk-off trigger at -6%; current regime neutral = hold 50/50 cyclical/defensive; no margin; no naked options

FINAL CIO VERDICT

RISK POSTURE

Neutral

CAPITAL SHOULD FLOW TO

Deploy 40–50% into XLI/XLE/IYZ/XLB on support dips; hold 20–30% SPY core; reserve 20–30% cash for earnings vol spikes; wheel 30% capital XLE puts, XLI puts (high premium environment)

AVOID COMPLETELY

Tech strength fade risk (XLK up but lagging); avoid ADBE buy into earnings; skip small-cap speculative (RRGB, GLBS, ACB) until volume/price confirm; no naked puts; no margin; stay defensive

		on growth tech until ADBE earnings pass
