- AVGO -11.8% post-earnings signals tech/AI narrative shift; watch for contagion to CRWD, MU, ARM, AMD
- Semis weakness spreading (ARM -5.03%, MU -5.66%, AMD -3.05%); CapEx/demand cycle concern rising
- VIX estimated 16-18 range; upper band of healthy trend; any macro surprise could spike to 20-25
- Overnight S&P 500 futures -0.35%, NQ -0.47% = reversal risk if cash market doesn't hold SPY 757.50
- IWM outperformance +1.61% vs SPY +0.47% = liquidity/alpha rotation; watch if semis/mega-cap remain under pressure
- Earnings tape (AVGO, CRWD, LULU, DOCU, DG) highly binary; IV crush post-print expected; be defensive pre-earnings
- Private credit rotation active per macro tape; duration/yield curve matters; watch 10Y yield behavior into weekend

FINAL CIO VERDICT

RISK POSTURE	CAPITAL SHOULD FLOW TO	AVOID COMPLETELY

Neutral	Deploy 40% dry powder: JPM 2-3%, MRK 2-3%, MU accumulation zone 2%, NET dip buying 2%, ARM reversal/bounce 2%. Reserve 30% for AVGO/ CRWD post-earnings clarity and semis stabilization. Hold core SPY/IWM.	AVGO until support holds and guidance clarity; CELH breakdown -7.83% (avoid); CRWD pre-earnings unless dip buying at 680-685; overleveraged semis (AMD, MU) until CapEx cycle re-confirmed; any stock gapping below support on volume—let volatility settle first.
