RISK ALERTS

U.S.-Iran 'pause' is fragile; geopolitical black swan risk remains; oil premium sustainable but trigger-ready at $75 WTI

Polymarket 54% down probability vs. strong premarket = institutional selling into strength; fade rip discipline required

Tech earnings week (Tue-Wed) introduces IV crush risk; trim call positions before Thu morning into expiry

Small-cap (IWM) lagging indices; rotation risk if macro data softens; watch 285.00 support for capitulation

Crypto weakness (BTC $60k near lows) signals risk-off undercurrent; monitor as leading indicator vs. equities

FINAL CIO VERDICT

RISK POSTURE

Neutral | Light Aggressive

CAPITAL SHOULD FLOW TO

80% deployed into CMCSA/ARM breakouts + SPY core | 20% cash for NKE/REPL earnings week dips

AVOID COMPLETELY

Naked short options on volatility; avoid small-cap (IWM) longs pre-data; skip illiquid biotech outside REPL; do NOT chase QQQ >720 without earnings clarity
