RISK ALERTS

GEOPOLITICAL ESCALATION: Iran threatens Hormuz closure; oil spike +2%; supply shock tail risk active

TECH CONCENTRATION: GOOGL -5%, QQQ -2.37%; reduce mega-cap exposure to <8% per position

VIX REGIME SHIFT: Estimate 22-24 (caution zone); portfolio -6% trigger approaching; raise cash to 15-20%

EARNINGS VOLATILITY: FDX, CCL, CBRS today; MU massive beat expectations tomorrow; pre-earnings hedges recommended

DOLLAR STRENGTH: EUR/USD 1.1426; emerging markets under pressure; reduce EEM, add developed market hedges

FINAL CIO VERDICT

RISK POSTURE

Defensive

CAPITAL SHOULD FLOW TO

RAISE CASH: trim QQQ, GOOGL; deploy into energy (XLE), clean infra (ICLN), defensive sectors (XLV, CIBR). Target 15-20% dry powder for geo shock absorption.

AVOID COMPLETELY

Software (IGV, XSD), IT Services (JKR), mega-cap tech concentration >10%, naked earnings exposure, leverage (reduce SOXL), EEM/EM without hedge
