RISK ALERTS

ACN/KR/PGR premarket earnings binary catalysts: high vol intraday; position size accordingly

Energy sector capitulation flush (LMT -3.97%, NOC -5.15%, HAL -3.63%): May trigger reversal; avoid selling oversold names into recovery

NVDA -6.2% weakness vs. TSM/MU/AMD strength = bifurcated semis narrative; not a broad sector capitulation; stay long quality

SMCI +10.31% micro-cap volatility: Potential squeeze exhaustion above 35; lock profits; do NOT chase

Tech earnings season concentration: ACN print will heavily influence QQQ/XLK follow-through; Broadcom -8% + Nvidia -6.2% remain headwinds

FINAL CIO VERDICT

RISK POSTURE

Aggressive

CAPITAL SHOULD FLOW TO

Deploy 70% into TSM/MU/AMD semis breakouts + ACN post-earnings dips; Reserve 20% for ACN earnings surprise pivot; Hold 10% dry powder for LMT/energy oversold reversals

AVOID COMPLETELY

LMT, NOC, COP, CVX, HAL (defense/energy capitulation on peace deal); Avoid chasing SMCI above 35; Skip NVDA until stabilizes above 408-410; Avoid bottom-fishing ACN before earnings clarity
