

CIO EXECUTIVE SUMMARY

- ▶ Oil spike + Iran geopolitical tension driving premarket weakness; VIX elevated, rates sticky
- ▶ Tech leading decline (-2.21% XLK) as duration assets repriced; semis most vulnerable into NVDA earnings
- ▶ Institutions rotating defensively: utilities + healthcare outperform; small-cap cyclicals lagging hard
- ▶ Pre-earnings hedging active in NVDA complex; wheel sellers elevated on VIX; ADI/WMT/TGT pre-open catalysts
- ▶ Capital raise mode: trim strength in overweight longs; build dry powder for dip-buy entries sub-SPY support

MACRO DASHBOARD

SPY TREND

Down 0.61% | Support 730 | Resistance 738

QQQ TREND

Down 1.23% | Tech sector pressure | Growth duration selling

IWM TREND

Down 1.18% | Small-cap lagging | Yield-sensitive

VIX

Elevated/Firm | Premarket bidding VIX futures higher

VIX REGIME

20-25 CAUTION | Geopolitical + rates uncertainty

YIELD 10Y

Rising | Bond selling pressure | Rate-sensitive equities under fire

DOLLAR TREND

No live print | DXY likely stable on safe-haven bid

OIL TREND

Rising sharply | Iran geopolitical impasse cited | Inflation concerns

CRYPTO SENTIMENT

No live BTC | Likely risk-off tone

TACTICAL BIAS

**Fade Strength | Build hedges |
Trim into weakness**

upcoming | Sell puts into vol spike

HEDGE

SPY

VIX 20-25 caution regime | Oil/rates pressure | Buy 730 puts (5-10% portfolio hedge)

BUY

SHY

Short duration treasury ETF | Vol rising | Dry powder proxy; 3-5% allocation

EXIT

Any underwater positions below -8%

Risk-off trigger active | No margin; raise cash for dip buys

TICKER	SECTOR	IV RANK	DELTA

RISK ALERTS

-  Oil spike + Iran geopolitical risk cited as key overnight catalyst; monitor for widening spreads
-  VIX elevated 20-25 regime; risk-off posture active; tighten stops on momentum names
-  Earnings week density: NVDA post-close (largest vol impact), WMT post-close, TGT/ADI pre-open
-  Rate sensitivity high: 10Y yield rising pressure on duration assets; tech/growth most vulnerable
-  Tech sector down 2.21% (XLK); duration selling active; small-cap (IWM -1.18%) lagging; rotation underway

FINAL CIO VERDICT

RISK POSTURE

Defensive

CAPITAL SHOULD FLOW TO

Trim tech overweight to 40% QQQ; rotate 10% into XLU/utilities; hold 15-20% dry powder in SHY for dip-buys; cut margin exposure to zero

AVOID COMPLETELY

Avoid new long positions in unprofitable software, commercial real estate, broad small-cap cyclicals; do not chase momentum names above resistance; avoid naked short calls into NVDA earnings
