RISK ALERTS

- ⚠️ Oil/inflation pressure persists (Tue SPX -0.44% driver); monitor 3-5 PM ET macro catalysts before close
- ⚠️ CSCO after-close earnings: call vol 3x avg implies $\pm 6\%$ move; manage straddle/condor risk post-print IV crush
- ⚠️ Microcap biotech (INO +12%, MVIS +7%, BNGO) premarket spikes 5-15% — high short-squeeze risk; avoid naked puts
- ⚠️ VIX elevated ~15-16 range near caution threshold (20); if breaks above 18, shift to defensive posture (reduce size, add hedges)
- ⚠️ Portfolio max ticker exposure: CEG 5%, ENPH 5%, LLY 4% = 14% total concentration; rebalance if any position gains >8% above entry
