EXIT

IONQ

Speculative unwind; -4.52%; quantum hype cooling; vol ratio 1.6x but no institutional bid; exit 100%; avoid bounce chase

- RISK ALERTS
- AVGO earnings tonight; IV crush post-print; avoid naked short calls; manage deltas

Fed rate regime: zero 2026 cuts priced; any inflation reacceleration = volatility spike; portfolio hedges active

Geopolitical oil risk (U.S.-Iran); WTI support \$90, resistance \$100; watch escalation news; energy whipsaw possible

Tech sector rotation away from growth; AMZN, COIN, IONQ weakness structural, not temporary; avoid FOMO longs

Portfolio at +3.2% YTD; trim winners +8% rule active; max 10% single-ticker exposure; respect position sizing

FINAL CIO VERDICT

RISK POSTURE

Neutral

CAPITAL SHOULD FLOW TO

Rotate 60% capital to energy (XOM/COP/HAL longs) + 20% to wheel book (MA call overwrite, UBER). Hold 20% dry powder for dips. Avoid growth FOMO. VIX regime permits sector rotation, not broad tactical shifts.

AVOID COMPLETELY

AMZN naked long (wheel calls only). COIN, IONQ (speculative unwind). SLV breakdowns. Naked growth/thematic bets. Margin strategies. Fed-sensitive unprofitable tech. Oversold bounces in crypto.
