RISK ALERTS

VIX inferred <15: complacency risk; gap/flash-crash risk if Fed narrative shifts

Fed September hike 64% odds: watch 10Y yield for inversion signals; duration risk to growth

ACN guidance miss: mixed sector signal for enterprise software; monitor for rotation underperformance

CRE concentration in banking sector: office/multifamily lenders remain structural laggards despite Basel relief

Iran deal sustainability risk: geopolitical event risk remains; oil could reprice quickly on escalation

FINAL CIO VERDICT

RISK POSTURE

Aggressive

CAPITAL SHOULD FLOW TO

Full deployment: 50% SPY/QQQ/IWM (position trading); 20% ACN/KR/MU (earnings hedge); 30% XLF/wheel premium (income). Bank capital relief + tech rebound + geopolitical easing support risk-on. Iran deal = structural tailwind for oil decline; gasoline <\$4 removes inflation hedge need. Fed hike odds high but market treating as growth-supportive (AI capex cycle intact). Dip to 744 (SPY) or 733 (QQQ) is buy for 75bps allocation.

AVOID COMPLETELY

CRE-heavy bank lenders (LAD, KEY, OHI); duration-sensitive bond proxies if 10Y breaks 4.50%; naked short vol (VIX <15 fragile); illiquid biotech names outside ANIX post-earnings pop. Avoid size in ACN until guidance/cyber deal clarity.
