

CIO EXECUTIVE SUMMARY

- ▶ VIX 17.01: Healthy trend regime; mixed macro (US-Iran headlines + PCE focus) offset by AI/semi strength
- ▶ SNOW +36% vol-spike anomaly + SMCI +8.2%, ARM +10.89%, HOOD +11.17% signal rotation into semiconductors & retail vol
- ▶ Real assets/infra/industrials outperforming vs growth; value rotation structural but not violent yet
- ▶ Premarket S&P futures -0.25%; crude +1.15% on geopolitical bid; bonds stable—consolidation pattern into PCE
- ▶ Portfolio positioning: Trim overweight growth (ARKK, QQQ); add tactical value/semis; wheel opportunities in 30+ IV rank names

RISK ALERTS

- ⚠️ US-Iran headlines driving oil/bonds; monitor for escalation; SPY premarket soft (-0.25%); wait for PCE data 10 AM before major moves
- ⚠️ SNOW +36% anomaly: post-earnings squeeze likely to reverse; short call spreads on any strength; avoid long into spike

⚠ VIX 17.01 = complacent tape; black swan risk (Iran, macro shock); hedge 15% long exposure with OTM puts

⚠ Growth rotation ongoing; ARKK/QQQ near resistance; trim winners (PLTR +8%, SMC +8.2%, ARM +10.89%) per 2.5% rule on +8% gains

⚠ Earnings calendar heavy (CRM, DLTR, BOX, MOD, ZS, SQM); avoid directional bets into events; use spreads/strangles for theta focus

FINAL CIO VERDICT

RISK POSTURE

Neutral (Slight Bias: Fade Strength; Trim Growth; Build Real Assets)

CAPITAL SHOULD FLOW TO

40% deployed (semis, industrials, RTX defense); 20% raised (ARKK trim, QQQ hedge); 40% dry powder for dips on PCE volatility

AVOID COMPLETELY

Unprofitable growth (TTD, CRM post-beat); crowded long NQ hedges; naked short calls; leveraged long into Iran vol; small-cap biotech (event risk); any position >10% ticker exposure
