MONITOR	PANW	After-close earnings Wed; 335-340 dip buyable; await post-earnings setup; avoid pre-market fade

RISK ALERTS

Earnings week collision: AVGO, CIEN, CRWD, PANW, HPE all Wed; gamma/theta volatility spike expected

QQQ -0.71% signals tech sector rotation; unprofitable growth under pressure; monitor XLK -1.34% trend

VIX complacent <15; earnings week IV expansion likely; position sizing critical; max 8% per name enforced

Iran ceasefire = geopolitical risk-off valve; any escalation reverses oil/energy bid; WTI ~\$90 fragile

DXY weak; supportive for equities but currency volatility into Fed policy; watch 10Y yield for context

Large-cap tech (AVGO, PANW, CRWD) put positioning heavy; short gamma risk if index breaks 740 support

IWM +0.54% outperforming; small-cap bid may signal institutional defensive rotation; monitor liquidity

FINAL CIO VERDICT

RISK POSTURE

Neutral

CAPITAL SHOULD FLOW TO

50% deployed in institutional earnings setups (CIEN, CRWD, HPE, WDC); 20% reserved for premium income wheel on post-earnings bounces; 30% dry powder for dips below support levels; hedge 5% QQQ with 740 puts on Wed morning

AVOID COMPLETELY

QQQ unprofitable growth sector; XLK weakness (-1.34%); pre-earnings fade into AVGO earnings (wait for post-close repricing); naked puts on high-beta names (CIEN, RBRK, SMCI); USD strength plays (DXY weak favors equities, not shorts)
