

CIO EXECUTIVE SUMMARY

- ▶ VIX <18 signals complacency amid record highs; 235 new lows vs 120 highs = dangerous breadth divergence
- ▶ Tech mega-caps driving 1/3 YTD earnings; rotation into obscure defensives (AXON, EVLV) + infrastructure flagged
- ▶ PPI inflation scare (May 13) + geopolitical tension = tape fragility; watch 7,460 SPX resistance
- ▶ Earnings flow: WKHS +12%, SPCE, BTCS vol spikes; microcap options premiums elevated—wheel opportunity
- ▶ CMS hospice freeze + fraud probes = healthcare headwind; sector lagging; avoid MLPs until clarity

MACRO DASHBOARD

SPY TREND

Records near 7,484; narrow breadth rally (tech-led); trendline intact but fatigue evident

QQQ TREND

AI mega-caps (+3-4%) masking semiconductor/semis lag; Mag 7 bubble risk rising

Small-cap lag (-0.18% vs +0.79% SPY); rotation away from economically sensitive names

VIX

17.79 (below 18)

VIX REGIME

Complacent—ignoring geopolitical/inflation risks; vol sellers in control

YIELD 10Y

No fresh data; prior mixed on hot PPI; expect 4.0-4.3% range hold

DOLLAR TREND

Stable on inflation watch; DXY flat; commodity weakness (oil down)

OIL TREND

WTI edging lower pre-PPI; geopolitical premium partially priced but fragile

CRYPTO SENTIMENT

Bitcoin decoupled; COIN +8.28% on retail euphoria; crypto vol elevated

TACTICAL BIAS

Fade Strength—breadth failure + complacent VIX + narrow rally = short-term pullback risk

RISK ALERTS

- ⚠ Breadth divergence critical: 235 new lows vs 120 highs on S&P record = distribution flag
- ⚠ VIX <18 ignores geopolitical risk; vol sellers congested; expect 1-2% pullback reversals
- ⚠ Tech mega-cap concentration (Mag 7) = 1/3 YTD earnings; rotation risk if Mag 7 stumbles
- ⚠ PPI inflation scare lingers; 10Y yield risk 4.3%+; rate-sensitive sectors vulnerable
- ⚠ CMS hospice freeze + fraud probes = healthcare sector headwind; avoid MLPs/ pharma names
- ⚠ Small-cap lag (IWM) signals risk-off building; rotate to large-cap quality on dips

⚠ Microcap earnings vol (WKHS +12%, SPCE, BTCS) = pin risk; manage wheel position sizing

FINAL CIO VERDICT

RISK POSTURE

**Neutral-to-Aggressive
(50/20/30
rebalance)**

CAPITAL SHOULD FLOW TO

Allocate \$25K to institutional setups (AXON, EVLV, SMCI, ENPH, HOOD, COIN) with 8–10% position caps. Reserve \$15K for dips (BA, CEG, OXY). Run \$10K wheel premium on HOOD/COIN/ENPH calls (21 DTE); put-sell HOOD \$76–\$78 (cap loss \$3.8K max). Monitor 7,460 SPX resistance; exit 1/3 long on break above +12% gain. SDS hedge 0.5% if VIX fails to spike on 2% pullback.

AVOID COMPLETELY

Healthcare (CMS freeze, fraud risk). Naked options (rule breach). Margin (rule breach). Stocks <\$10 (exclude EVLV microcap once >\$10). Chasing COIN above \$222. Over-sizing HOOD beta (max \$3K). Tech mega-cap shorts (Mag 7 momentum intact, short squeeze risk).
